Daniele Giacomelli

Junior Software Developer · Turin, Italy

linkedin.com/in/daniele-giacomelli | github.com/daniele-giacomelli

Profile

Web and backend developer. I have built and maintained a production website for a client and developed REST APIs in Java/Spring Boot with PostgreSQL and in Express with MongoDB. I graduated in Computer Science (November 2026) and I am now a Master's student in AI for Biomedicine and Healthcare at the University of Turin. I am looking for a part-time position compatible with my university schedule, in Turin or remote.

Skills

Languages	Java, Python, C, JavaScript, SQL, PHP, HTML, CSS
Frameworks	Spring Boot, Node.js/Express, PyTorch, torchvision
Databases	PostgreSQL, MySQL, MongoDB
Tools	Git, GitHub, REST APIs, Docker (basic), Figma

Experience

Web developer (occasional collaboration) — GHIVA Progettazione CAD 2026

- Redesigned in PHP, HTML, CSS and JavaScript the bilingual (Italian/English) website ghiprog.it, dedicated to KGM1, an airborne wind energy research project.
- Handled SEO: clean URLs, per-page titles and previews, sitemap with hreflang, indexing on Google and Bing.
- Found why the site would not open on phones: they force HTTPS, not active on the server (IIS/Plesk).
- Site maintenance and news updates.

High school internship (PCTO) — AIC Automazioni Industriali Capitanio Jan 2021

- Data archiving and user interface in Python and Ignition HMI.

Projects

Hand joint configuration estimation for pediatric bone age assessment from X-ray images 2026

Bachelor's thesis (in Italian) · Supervisor Prof. Marco Grangetto · Python, PyTorch, torchvision

- Replicated in PyTorch the first two stages of the BoNet pipeline: hand detection with Faster R-CNN and estimation of 17 anatomical hand keypoints with Keypoint R-CNN, by fine-tuning pre-trained models.
- Designed an extension of the keypoints to both hands through image mirroring, comparing four model variants.
- Wrote the training and evaluation scripts, run on a server with NVIDIA GPUs.

Football statistics web app — university group project 2024

Java, Spring Boot, PostgreSQL, Node.js, Express, MongoDB, Socket.IO

- Microservice architecture: main Express server with EJS views and two REST services, Spring Boot + PostgreSQL and Express + MongoDB, documented with Swagger/OpenAPI.
- Built the search and filter endpoints in Spring Boot and the match APIs in Express/MongoDB, the real-time chat with Socket.IO and the quick search.

Education

Master's degree in AI for Biomedicine and Healthcare — University of Turin 2026 – present

Bachelor's degree in Computer Science — University of Turin 2021 – Nov 2026

High school diploma in Computer Science and Telecommunications — I.I.S. Perlasca, Vobarno 2021

Languages

Italian native | **English** fluent
